NAGALAKSHMI K

Madurai, India | 9566761872 | nagalakshmi002799@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Full-stack Software Developer (4+ years) specializing in real-time communication systems — chat, VoIP/SIP calling, and video conferencing — using React.js, React Native, Node.js, and Java/Spring Boot. Delivered end-to-end features across multiple production applications, from architecture through deployment, including multi-tenant platforms and chatbot-integrated workflows. Currently deepening Java/Spring Boot expertise and building foundational knowledge in AI/LLM. Immediate joiner.

TECHNICAL SKILLS

Frontend	React.js, Next.js, React Native, Redux
Backend	Java, Spring Boot, Node.js, NestJS
Databases	MongoDB, PostgreSQL, Firestore, Redis
Cloud/DevOps	AWS (SQS, SNS), Docker (basics), CI/CD (familiar)
Tools	Postman, Swagger, Git, Bitbucket, Jenkins
Methodologies	Agile/Scrum, REST API Design, Role-Based Access Control (RBAC)
AI / LLM	GitHub Copilot, Generative AI-assisted development; basic knowledge of AI/LLM (recently started learning)
Languages	Java, JavaScript, HTML, CSS

PROFESSIONAL EXPERIENCE

Freelance Developer
Oct 2026

Independent / Self-employed

- Delivered a live, responsive travel-agency website (React.js, Vite, Tailwind CSS) on a rapid turnaround to meet the client's urgent go-live requirement — live at ridewetoursandtravels.com
- Handled design-to-code, responsive UI, and deployment independently, end-to-end
- Scoped as Phase 1 (static site); Phase 2 (planned) will add AI-assisted features and database-backed functionality

Software Developer
Apr 2022 – Feb 2025

Maestrowiz Solutions Private Limited

- Owned end-to-end delivery of multiple production mobile and web applications, working across frontend, backend, and deployment using React Native, React.js, and Node.js
- Took architectural ownership of real-time features — messaging, notifications, and communication modules — collaborating with design and QA to ship reliable, scalable releases
- Improved code quality and maintainability by introducing reusable component patterns and structured state management practices across projects
- Worked in Agile/Scrum sprints, participating in sprint planning, code reviews, and cross-functional stakeholder syncs to consistently meet release deadlines

Software Developer
Jan 2021 – Mar 2022

Prosperous Tech

- Built responsive web and mobile applications using the React ecosystem for a growing customer base
- Contributed to backend API development and database design across a wide range of REST endpoints
- Built a strong full-stack foundation across frontend, backend, and product workflows in a fast-paced startup environment

KEY PROJECTS

EduKat Platform — Parent, Teacher & Admin Apps (Major Project)

Tech: React.js, React Native, Node.js, Firestore, Redux

Designed and built a multi-role education ecosystem spanning three connected applications — Parent app, Teacher app, and Admin web portal — enabling real-time collaboration between schools, teachers, and families. Architected the data layer on Firestore for real-time sync across attendance, announcements, and chat modules. Built a chatbot-driven communication system with voice input and speech-to-text transcription, enabling hands-free messaging for busy parents and teachers. Implemented rich messaging with image/PDF sharing, Firebase Cloud Messaging for real-time alerts, and role-based access control (RBAC) to securely separate parent, teacher, and admin permissions across the platform.

SMBLee — Real-Time Communication & Video Conferencing Platform

Tech: React.js, React Native, Spring Boot, WebSockets, SIP, Jitsi

Built a real-time audio/video communication platform supporting heavy concurrent usage, integrating SIP (Verto) for high-quality VoIP calling and a scalable WebSocket-based messaging layer. Delivered video conferencing with recording, in-call chat, file sharing, and multi-user meeting scheduling.

OrderEase Hub — Multi-Channel Product Ordering System

Tech: React Native, Node.js, MongoDB, WhatsApp Business API (Meta)

Built a multi-channel ordering system (mobile app + WhatsApp) with a unified backend for catalog and order management. Directly integrated the Meta WhatsApp Business API for end-to-end order placement, order status updates, and customer notifications — enabling a seamless, conversational ordering experience alongside the native app.

ChatWhiz — WhatsApp Customer-Agent Communication Platform

Tech: Node.js, React.js, MongoDB, Redis

Built a real-time customer-agent chat system on WhatsApp Business API, using Redis caching and socket optimization to substantially cut response latency and support high-volume concurrent sessions.

Admin Hub — Multi-Tenant Admin & Access Management System

Tech: React.js, Node.js, MongoDB, PostgreSQL

Built a multi-tenant admin platform with a dynamic form builder and hierarchy management for multiple tenant organizations, implementing RBAC with Azure AD authentication and optimizing database queries for faster, more reliable API responses.

RideWe Tours and Travels — Travel Agency Website (Freelance, Live)

Tech: React.js, Vite, Tailwind CSS | ridewetoursandtravels.com

Delivered a live, responsive website on a rapid turnaround to meet the client's urgent go-live requirement. Scoped as Phase 1 (static site); Phase 2 (planned) will add AI-assisted features and database-backed functionality.

EDUCATION

MCA *2019 – 2021*

K.L.N College of Engineering

B.Sc Information Technology *2016 – 2019*

The Madura College

CAREER BREAK

Career Break — Maternity *Feb 2025 – Present*

- Took a planned career break for childbirth and childcare, as extended maternity leave was not available at the previous organization
- Currently preparing in Java and Spring Boot, and have recently started learning AI/LLM (basic knowledge) to align with my full-stack and real-time communication role
- Took on freelance client work (see Professional Experience) to stay hands-on during the break
- Immediate joiner, available full-time
